

SOLAPOLY

NFT Roadmap

IDEA OF SOLAPOLY NFT

Board games are one of the fun and educational games that people of all ages play with love. Thanks to board games, people both have a good time with their friends or family members and enter into a competitive environment. The rules of board games are simple and clear. Thus, it is possible for even those who do not have experience with the game to adapt quickly. Orientation time to board games usually takes a very short time. In addition, the game mechanics are designed to be universal so that the games are also culturally independent. In this way, people from all cultures can easily meet on the same board.

The fact that board games are suitable for people of all ages, all experiences and cultures allows them to reach a wide audience from the moment they are released. Although the history of board games is more than 100 years, they have been able to develop themselves very little over time and have continued their existence for a long time without any change. Everything that resists change, eventually perishes. Do board games that resist change also be in danger of extinction?

As the **Solapoly** team, we have played almost all kinds of board games many times since our childhood. And we believe that board games have the power to bring people together. In our opinion, a new kind of board game that adapts to change is possible. So, we started developing an innovative board game.

In **Solapoly**, we bring together the game mechanics of board games, the accessibility of online games and the opportunities of the NFT world, resulting in the concept of Board Games 2.0. We do not accept that the NFT world is in a position that can only be limited to the arts. The NFT world has a potential to touch all areas of real life. We want to show the potential of NFT by integrating it into board games. We aim to be one of the first and most successful examples of integrating the NFT concept into the board games.

WHAT IS SOLAPOLY NFT?

The **Solapoly** NFT collection, consisting of 10 thousand pieces, was created as the basis of the game. Solapoly NFTs can be actively used by all players at every stage of the game. Thus, **Solapoly** NFTs have both value of arts (like other NFT's) and an economic value in-game.

Solapoly is a real estate game where players buy properties and earn rental income from these real estates. There are mainly 2 building types in the game, houses and hotels. The houses in the game are of 4 different types – 1, 2, 3 and 4 floored. In addition to the houses, there are hotels in the commercial real estate class. In the game, all the houses and hotels that can generate rental income have been put into a 10,000-piece-NFT collection. The Solapoly NFT collection includes real estate properties of 2,000 cities, carefully selected from all countries of the world, considering their population and income levels.

SELECTION OF SOLAPOLY NFT CITIES

Solapoly NFT collection was created by selecting the cities in the collection from all countries in the world in a fair order to emphasize the universality of the game. In order to represent all countries, the capitals of the countries were added to the collection without ranking them. The other cards in the collection were determined by a special algorithm, considering the per capita income and population of more than 8 thousand cities in the world. Thus, 2000 cities, which have the largest share in the world economy, took their place in the collection. For each of the 2000 selected cities, 5 cards were designed as 1-floor house card, 2-floor house card, 3-floor house card, 4-floor house card and hotel card. For each NFT card in the Solapoly collection, a unique rental fee is defined.

In the game of **Solapoly**, rental income of a property significantly affects the basic dynamics of the game and the strategies of the players. NFT cards with high rental income gain a great advantage during the game. For a fair game, the rental income of the properties has been carefully calculated according to the city where it is located, whether it is a house or hotel, and the number of floors of the houses. Among the Solapoly NFT cards, there is a ranking by city, number of floors, and rental income.

A hotel card of a city is more valuable than home cards of the city. Among the house cards, there is a ranking of rental income from 4-floor house to 1-floor house. For a city in **Solapoly** NFT collection, the 4-floor house is more valuable than the 3-floor house, the 3-floor house is more valuable than the 2-floor house, and the 2-floor house is more valuable than the 1-floor house. Since the NFT card with a high rental income provides a great advantage to the player, the card with a higher rental income can be considered more valuable. The ranking between the cards in the **Solapoly** NFT collection will be announced shortly after the **Solapoly** NFT launch.

NFT STAKING

Staking is the process of keeping the cryptocurrencies locked in a wallet for a certain period of time without spending or transferring them. Staking wallets earn cryptocurrencies at certain rates during the time they lock the cryptocurrencies. It is necessary to use a special wallet software to start the staking process.

Staking is a concept that came to cryptocurrencies with the Proof of Stake (POS) mechanism. The biggest contribution is to avoid wasting a large amount of processing power. Staking is also beneficial for supply-demand balance as it limits the amount of cryptocurrencies in circulation. For the crypto money that supports the staking feature, the less money there is in circulation, the more likely the price will increase.

We –**Solapoly** team– have developed a revolutionary staking/rent method in the NFT world. Players who own Solapoly NFT can rent their NFTs to other players when they are not using it, specifying the time interval (1 week, 1 month, 1 year). The NFT leasing player pays the rent to the NFT owner and can use the NFT while playing the **Solapoly** game during the lease period. When the lease expires, the NFT is unlocked and the owner of the NFT can use the NFT however he/she wants.

IS NFT STAKING SECURE?

The NFT owner sends the NFT he wants to rent to the **Solapoly** Staking pool. When any NFT in the **Solapoly** staking pool is leased, it will not be transferred to the leasing player's wallet. The right to use the NFT is defined in the game for the player who rents. The NFT whose staking period is over is automatically sent to the wallet of the NFT owner.

E.g; The person who has the Paris Hotel NFT wants to rent it for a total of 30 solana for a period of 1 month. Players who want to rent this NFT can rent this card on a daily, weekly or monthly basis. The player who wants to rent on a daily basis will have the right to use the Paris hotel card in the game for 1 day by paying 1 Solana. When the 1-day rental period is over, NFT is added back to the staking pool. It is seen as rentable again in the staking pool.

NFT MARKETPLACE

Solapoly NFT marketplace has been created specifically for players to buy and sell their **Solapoly** NFTs. All these NFT trades are executed on the SLPY token in the marketplace. Players can purchase SLPY tokens from exchanges where the SLPY token is traded. Or they can get SLPY tokens for free by playing the game **Solapoly**. Thus, active players can accumulate enough SLPY tokens by playing **Solapoly** game and buy an NFT with these SLPY tokens.

SUMMARY

- **Solapoly** NFTs have an important use in the game of **Solapoly**. **Solapoly** NFT cards have high rents in game. Players who gain high rent have a great advantage in the game.
- **Solapoly** NFTs are easily traded on the specially designed **Solapoly** NFT Marketplace. NFTs can be traded in secondary marketplaces or quickly bought and sold in **Solapoly** NFT Marketplace. Thus, **Solapoly** NFTs will be continuously supported by the **Solapoly** team so that they can create a greater economy.
- Thanks to the NFT Staking feature, **Solapoly** NFT owners have the opportunity to earn passive income.
- Trading **Solapoly** NFTs with SLPY tokens supports the Play To Earn structure of the game. Thanks to the Play To Earn system, players earn SLPY tokens by playing games. This can be an alternative way for players to earn regular income.
- **Solapoly** NFTs are bought with the SLPY token. This increases the demand for the SLPY token. As the demand for SLPY token increases, players play more games to earn SLPY tokens. Playing more **Solapoly** games increases the demand for **Solapoly** NFTs. A positive loop is formed between the **Solapoly** NFTs and the **Solapoly** game.
